

## Multiple IP to QAM Modulator

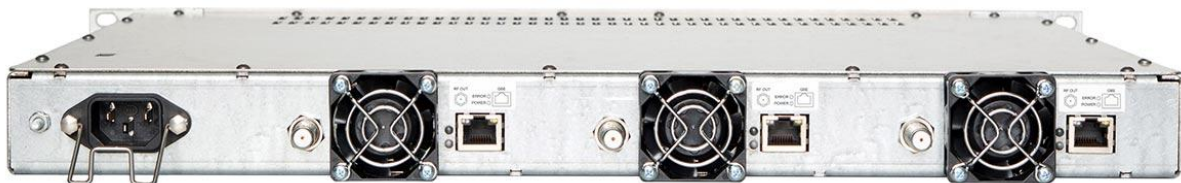

DirectQAM inside

The Multiple IP to QAM Modulator is a 19-inch 1U high unit. The unit contains up to three DirectQAM modules generating a total of 24 QAM channels and a plug-in power supply. (with the option to place a second redundant power supply)

Front view

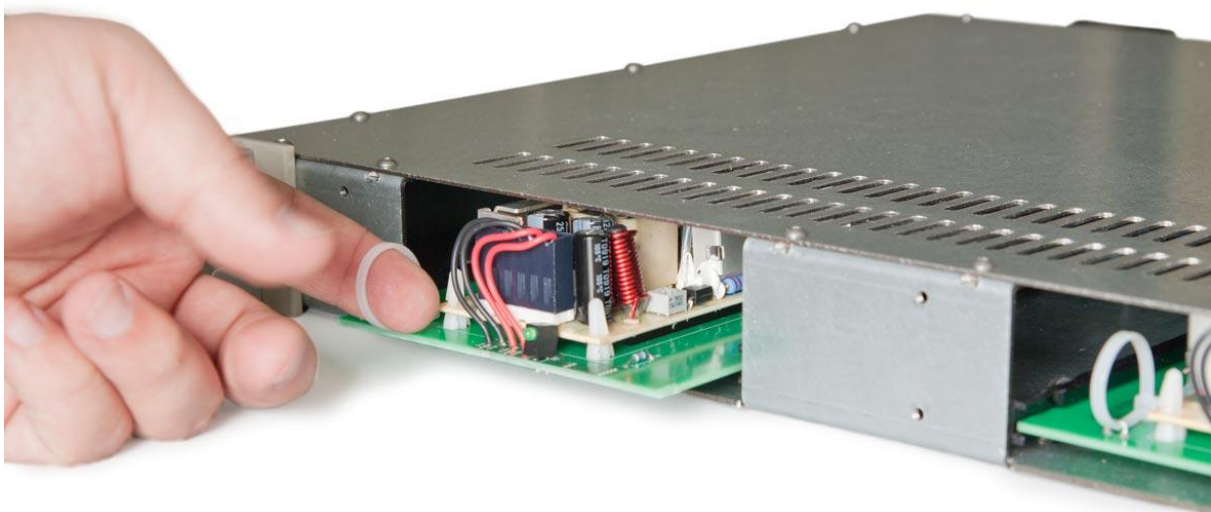

Back view

The power supplies are redundant. When one of the PSU's fails, it can be replaced without interrupting service. The power supplies can be reached by removing the six screws on the middle front panel. When you remove the middle front panel, you can see the PSU's.

You can then use the pull-tab to remove the defective PSU and replace it with a new one.
